Dear Colleague,

Bradley Products, Inc. introduced **The Davidson Marking System**® in 1984. These high quality tissue marking dyes continue to enjoy wide acceptance in hospitals, clinics and research facilities around the world.

These dyes are visible, reliable and safe. Their major application continues to be marking peripheral tumor or surgical margins. By applying one dye to the superior border, another to the inferior border, etc., one can identify the location of tumor or other pathology within a specimen. The dyes are also used to process multiple specimens in a single cassette. Specimens are marked with different colors, processed together, and then are all sectioned and stained on a single slide. This is both efficient and economical. Specimens retain colors and are easily distinguished.

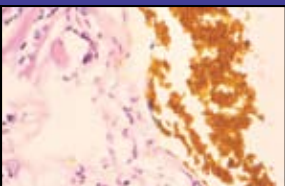

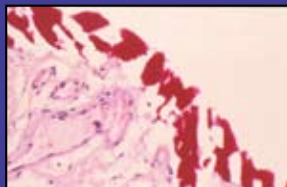

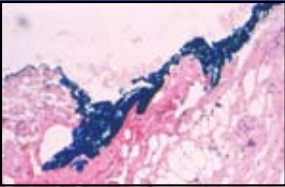

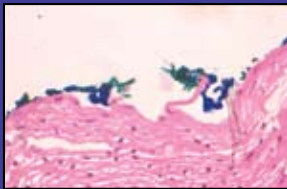

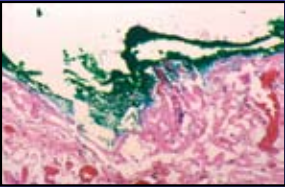

In response to your requests, we are pleased to announce **NEW** products — **a NEW Color, NEW Sizes, NEW Sets.**

In addition, **The Davidson® Cryocup® System** has revolutionized frozen section processing and **The Davidson® Small Specimen Kit** solves the problem of tracking small specimens during histologic preparation.

Visit our web site at www.bradleyproducts.com for more information on all of the Davidson® products. As always, I appreciate the letters sent to me describing issues, uses and concerns regarding our products, and strongly encourage that communication.

Sincerely,
Terence Davidson, M.D.
Professor of Head and Neck Surgery, UCSD

Lab Slides of Davidson® Dyes In Use

Caution: Dyes are permanent.
Never apply these dyes to a living patient.
